

Assignment

Day 3 – Assignment

Instructions:

- Download the application source code required for completion of this assignment from the following link

[Application Source Code Download Link](#)

1. Find the Insecure coding practices used in the application

Open the given application using android studio or jadx-gui, run the application, check the source code for insecure coding practices used in the application. Find at least three.

Hint: Look for components, inputs taken, webviews loading, encryption algorithms, etc.

2. Secure Code Snippets

Give secure code snippets for the corresponding insecure code found.

Note: No need to share the apk file. Only code snippets of secure coding practice to be put in a pdf document.

3. Associated vulnerability

For each Associated insecure coding practice, explain what vulnerabilities it is introducing to the application and those vulnerabilities belong to which OWASP Mobile Top 10

Deliverables

- All commands/steps written in a doc file.
- Convert the doc file into PDF.
- Upload PDF to LMS before the deadline.
