This challenge, simulates a high security environment designed to protect a **hidden secret string**. To successfully complete this task, you must analyze the application's binary components, identify its protection mechanisms, and develop a methodology to bypass them and extract the secret string

Your final submission must include the

1. **exact hidden secret string**,
2. a detailed explanation of the defenses you encountered,
3. the scripts or techniques used to bypass them, and a
4. step-by-step breakdown of how the string was successfully extracted.
